

Crystallizers:

brawn or brain?

Process Systems Enterprise Limited

Crystallizers can be a nightmare, as the engineers at one global chemical company well know. Our world-beating gPROMS® process modeling software helped them understand their crystallizers, control crystal size distribution, improve downstream solids processing and put an end to a lot of embarrassing downtime. Once again, gPROMS succeeded where conventional process simulators had failed.

But our software doesn't just do crystallizers. gPROMS can solve almost any process modeling problem, using techniques that are years ahead

of the competition. Our links to physical property packages such as OLI Electrolytes™, CFD packages Fluent® and STAR-CD, and Simulink® are unique. So are the tools built into gPROMS for designing experiments. And when we talk about open standards we really mean open.

You'll find us equally open to work with. Although we're technical trailblazers, we know about business too. We take care to understand our customers, and we treat them with respect.

Seven of the world's top ten chemical companies routinely use gPROMS and PSE's expert modeling services. Isn't it time you found out why?
